

Update from UNDP

TDR JCB
25 June 2019

Tenu Avafia
HIV, Health and Development Group, UNDP

Outline

- Recent developments at UNDP relevant to JCB
 - Steps take to implement MOU between WHO and UNDP
- Latest developments from UNDP's collaboration with TDR: the Access and Delivery Partnership
- Uniting Efforts towards innovation access and delivery

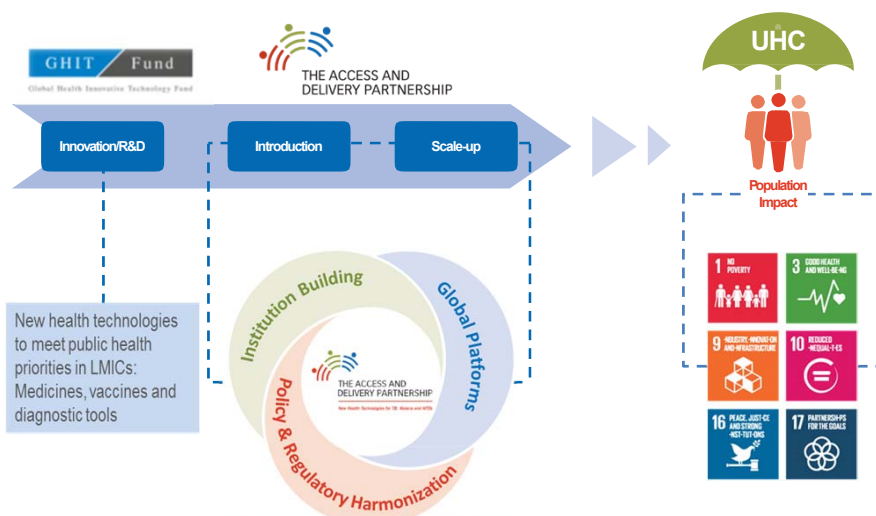

WHO-UNDP Memorandum of Understanding

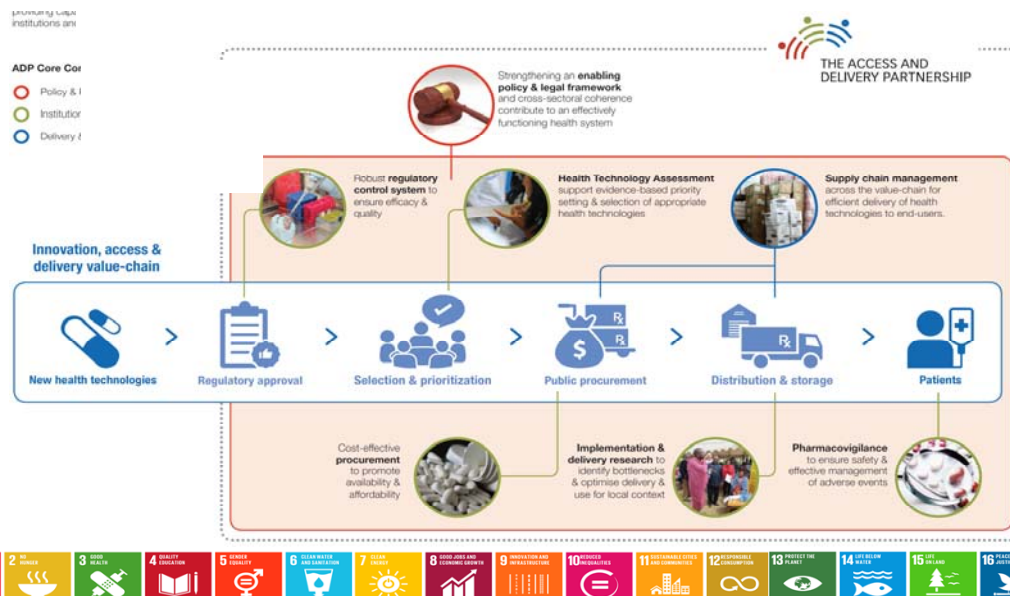

- MOU signed in 2018, three key areas of co-operation
- (a) **Universal health coverage**, supporting countries to strengthen health systems, addressing social, economic and environmental determinants of health, AMR
- (b) Multi-sectoral responses to **health emergencies**, well as **ensuring delivery of essential health services** in fragile, vulnerable and conflict-affected settings;
- (c) Scaling up multi-sectoral responses to **health challenges arising from climate change and environmental problems**

GHIT and ADP's Integrated Approach

Working Across the Value Chain of Access & Delivery

ADP's Integrated Approach in support of national actors

Scale up phase 2018-2023

- WHO formally joined ADP as a partner , joining UNDP, TDR & PATH
- WHO's key focus is to addressing regulatory barriers and strengthen capacity of DRAs
- Scale up to more countries (India, Malawi, Senegal, Thailand in 2018)
- Funding envelope for 2019-2020 is stable
- More focus on south-south learning and collaboration e.g. AU model law

Strengthening capacity for Implementation research

- IR helps to
 - identify system bottlenecks and the stakeholders
 - plan and conduct contextual research
 - integrate study results into health policies and programmes
- ADP built capacity for IR in target countries and helped the countries to identify research priorities

Strengthening safety monitoring

- ADP has contributed to building capacity for pharmacovigilance including active safety monitoring for new TB drugs
- For example ADP contributed to the collaborative work to roll out bedaquiline in Indonesia
- ADP is also engaging with countries in West Africa to build capacity for active safety monitoring for new TB drugs (collaboration with the WARN TB network)

Uniting efforts across funding R&D and Access

- GOJ, GHIT Fund and UNDP convening a broad range of stakeholders for cross-sectoral dialogues on:

For R&D funders:

- increasing visibility of R&D investments and priorities,
- Increase return on investment by facilitating collaboration and efficiency
- improve ability to evaluate impact on the R&D investments

For innovators and PDPs

- identify best practices to reduce cost and to increase efficiencies in biomedical research
- Share learnings on how to launch and adoption of health technologies at the country level
- highlight potential opportunities and common challenges to overcome

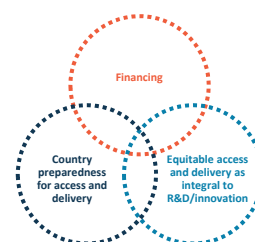

For Access Platforms

- increase visibility of innovation, access and delivery needs at country level
- identify interventions and strategies to ensure health technologies will be developed and made available as needed

First Global Dialogue

- In January 2019, the *Uniting Efforts* initiative was launched in Bangkok at a global convening that brought together over 100 representatives from biomedical R&D funder, innovators and access stakeholders.
- Participants shared challenges and best practices, identified areas for better coordination, highlighted issues requiring further dialogue and/or analysis
- The dialogue focused on the following key themes:
 - **Financing:** Strategies to ensure funding and investments result in positive impact for patients in need
 - **Equitable access and delivery:** ways to integrate access and delivery considerations earlier into the R&D process
 - **Country preparedness:** Prerequisites for access and delivery at country or regional levels

Opportunities for greater collaboration

Coordination

- **Developing shared principles** across the innovation–access–delivery continuum.
- Strengthening **multi-sectoral and South-South sharing** of approaches at country and regional levels.

Collective action

- **Enhancing the use of TPPs**, including expanded standards and more inclusive, multi-stakeholder approaches and processes
- Institutionalizing implementation research at the **national level**.
- Developing **investment cases** for specific NTDs.

Learning

- Improving understanding of **innovation, and access and delivery gaps** related to neglected disease portfolios
- **Building capacity** among key stakeholders on product development and launch strategies, health technology assessment.

Integration

- **Creating strategies** for consideration of access and delivery needs and challenges earlier in the R&D process.
- Improving **identification and coordination** of R&D and product development priorities.

Next steps

- GOJ, ADP and GHIT Fund are committed to supporting the continuation and expansion of this new space with a focus on driving and achieving concrete outcomes
- Through the global dialogue and a post-meeting evaluation survey, participants provided suggestions for specific approaches and issues to be considered by the global platform
- Next global dialogue will be announced shortly, as well as smaller technical meeting/working groups on key cross-sectoral issues that have been identified
